

$$\frac{dT}{T} + (r-1) M^2 \frac{du}{u} = 0$$

$$\frac{dp}{p} + \frac{du}{u} \left[1 + (r-1) M^2 \right] = 0$$

$$P = \rho R T$$

$$\frac{ds}{s} = f(M, u)$$

$$\frac{du}{u} = \frac{\frac{dM}{M}}{\left[1 + \frac{r-1}{2} M^2 \right]}$$

$$\frac{ds}{R} = \frac{(1-M^2)}{\left[1 + \frac{r-1}{2} M^2 \right] M} dM$$

$$M_2 = f(M_1, \gamma, \alpha, \frac{Z_w}{D_H})$$

Fanny friction factor :-

$$f = \frac{Z_w}{\frac{1}{2} \rho u^2}$$

Darcy's

$$f_D = 4f$$

$$f_D = f\left(\frac{Re}{\rho}, M, \frac{\epsilon}{D_H}\right)$$

→ Moody charts

Surface roughness
weak function

$$-\frac{dp}{\rho u^2} - \left[\frac{Z_w}{\rho u^2} \right] \cdot \frac{4dx}{D_H} = \frac{du}{u}$$

$$-\frac{dp}{p} - \left(\frac{f}{2} \right) \cdot \frac{4dx}{D_H} \cdot \frac{\rho u^2}{p} = du \cdot \left(\frac{\rho u}{p} \right)$$

$$\frac{\rho u^2}{p} = \frac{u^2}{RT} = \frac{\gamma u^2}{a^2} = \gamma M^2$$

After a LOT of algebra

$$\int_0^{L^*} \frac{4f dx}{D_H} = \int_{M_1}^1 \frac{(1-M^2)}{\left(1 + \frac{\gamma-1}{2} M^2 \right)} \cdot \left(\frac{2}{\gamma M^2} \right) \frac{dM}{M} \rightarrow f(M, \gamma) \quad \text{--- (A)}$$

$$\int_{x_1}^{x_2} \frac{4f dx}{D_H} = \int_{x_1}^{L^*} \frac{4f dx}{D_H} - \int_{x_2}^{L^*} \frac{4f dx}{D_H} = \int_{M_1}^1 (A) dM - \int_{M_2}^1 (A) dM$$

L^* - As the length required to reach $M=1$ from (x_1, M_1)

$$M \quad \frac{4fL^*}{Dh} \quad T/T^* \quad P/P^* \quad P_0/P_0^* \quad S/S^*$$

Fanno Line

$$h + \frac{u^2}{2} = \text{const}$$

$$h + \frac{(\rho u)^2}{2\rho^2} = \text{const}$$

$$h + c_p(T) + \frac{G^2}{2\rho^2} = \text{const}$$

$$T \uparrow \Rightarrow s \uparrow$$

$$\frac{4f dx}{D_H} = \frac{(1-M^2)}{4\frac{\rho}{2} M^2} \left(\frac{2}{\gamma M^2} \right) \frac{dM}{M}$$

$$f(M_1, f, D_H) = L^*$$

$$f(M_1', f, D_H) = (L^* + \Delta L)$$

$$\checkmark x < L^*(M_1)$$

$$L_s = f(M_2', f, D_H)$$

Tables

1. Isentropic flow $\gamma=1.4$
2. Normal shock "
3. Oblique shock "
4. Fanno flow "

To standardise, I will send a PDF over the weekend.

Numericals

1. C-D nozzle
2. Normal shock
3. Moving NS
4. Reflected moving NS
5. Oblique shock
6. Oblique shock reflection
7. oblique shock interaction
8. Fanno Flow

→ Infinite number of problems can be set up by combining two or more elements from above.
